

PROTECTING LIFE. PROTECTING TRUTH.

CORPORATE BROCHURE

A FAST-EVOLVING THREAT MATRIX

Across the globe public safety agencies face common challenges. The range and level of threats are rising on the streets, in the home and online. Agencies must cope with the potential for terrorist attacks; respond to cross-border illegal activity managed by sophisticated networks; keep pace with the ever-evolving risks presented by digital crimes; and more. But, many forces are facing a freeze or fall in budgets – without a simultaneous adjustment in expectations. In fact, they're often tasked with providing the same, or better, levels of service by finding more efficient ways to work. And, in our always-on connected world, police forces are adjusting to the need for more transparency to tighten the bonds of trust with the public they serve.

AXON: SAFEGUARDING TEAMS AND HELPING THEM SPEND MORE TIME ON THE STREET

At Axon, we're a team of mission-minded technology lovers working to help you address these issues by creating a seamless network of always-connected people, devices and apps that enable a new generation of policing. We're helping to safeguard officers and suspects by creating smart, less-lethal weapons that defuse situations. We're defending the truth by equipping officers with body-worn and in-vehicle cameras that automatically collect a record of how events unfold. Whether evidence is collected by your team or the public, we're making it easier and more cost effective to catalogue, manage and share digital evidence – be that collected by your team or the public. And, we're using technology to be a force multiplier – streamlining workflows to free your officers to spend more time policing and less on paperwork, to fully focus on what's in front of them, and to better protect themselves, their colleagues and the public.

AXON SMART WEAPONS: THE WORLD'S MOST TRUSTED LESS-LETHAL DEVICES

Our newest Conducted Electrical Weapons (CEWs) are the product of everything we've learnt from the 18,000 front-line law enforcement, private security and military agencies in 107 countries that use our less-lethal devices.

THE TASER X2

Designed with three things in mind – safety, accountability and performance – the **TASER X2** is our safest and most effective weapon to date:

- **Enhanced user protection:** A back-up shot removes the need to manually reload.
- **Defuse situations:** An audible warning arc increases voluntary surrenders.
- **Target effectively:** Dual lasers help your users target precisely
- **Act in confidence:** The TASER X2's smart cartridge is more durable, enhances reliability and avoids accidental discharge.
- **Incapacitate suspects:** The TASER X2 delivers electricity more effectively to the muscle mass.

The **TASER X2** is digitally connected to the Axon network and data streamed from the device – such as usage logs – can be stored and accessed via Evidence.com – our cloud-based Digital Evidence Management Solution (DEMs).

THE LIFE-SAVING DETERRENT

In 5.4% of deployments in the US, TASER use is deemed to have averted what would have been justified use of lethal force by law enforcement equating to:

202,214 LIVES SAVED.*

In a review of 1.04 million calls for service in three mid-size police departments in three US states over a two-year period, there were 1,201 uses of TASER. In 99.75% of cases, suspects suffered no serious injury.**

** From death or serious bodily injury*

*** Wake Forest School of Medicine*

ACCOUNTABILITY BUILT IN

The TASER X2 smart weapon is digitally connected. The charge output and firmware can be updated over the web and health checks performed remotely. And, critically, the device can wirelessly report its status, such as being armed or a trigger pull, so your Axon cameras can sense specific events and automatically begin recording incidents.

AXON'S CAMERA ECO-SYSTEM: PROTECTING OFFICERS AND THE TRUTH

Axon's video cameras play a lead role in building trust with the public, in reducing the use of force – by and against officers – and in encouraging earlier guilty pleas. They also provide a clear record of what happened to help teams prepare reports quickly.

In our connected eco-system of people, devices and apps, cameras automatically switch to record based on events you define. All footage is easily stored, managed, retrieved and shared using Evidence.com. And all our cameras enable teams to stream, view and tag videos in the field.

AXON BODY 2: THE LEADING BODY WORN VIDEO CAMERA

Our body worn camera helps your teams stay focused and features unlimited HD video with robust security.

- **See more. Hear more. Miss nothing:** Records in low light and HD, and makes voices more distinct, while a configurable buffer can capture up to two minutes prior to events.
- **Protect officers and the truth:** Helps officers stay focused on what's in front of them, with Axon Signal switching the cameras to record when events happen (e.g. activating a TASER Smart Weapon's light bar).
- **A tough companion for teams:** Built tough, the camera copes with all weathers and the rough and tumble of the street and can operate for 12 hours on one charge.
- **Ease video transfer:** The Axon Body 2 can stream videos over Wi-Fi and is Bluetooth-ready (to assign metadata).
- **Work with video on-the-fly:** Stream, tag and replay videos in the field.

THE METROPOLITAN POLICE AND BODY WORN VIDEO

The world's biggest roll-out of body worn cameras is underway across the Metropolitan Police Service's 32 boroughs, with up to 22,000 Axon Body 2 units being supplied to officers. Commenting on the deployment, Superintendent Adrian Hutchinson says:

"Londoners can feel reassured during their interactions with us, while we can better show the professionalism of our officers in the face of some of the incredibly demanding situations they deal with daily. With complaints down and early guilty pleas up, video is delivering against its promise of being one of the most important developments in policing in years."

AXON'S CAMERA ECOSYSTEM: PROTECTING OFFICERS AND THE TRUTH

AXON FLEX 2: FOR A WIDER AND SHARPER POINT OF VIEW

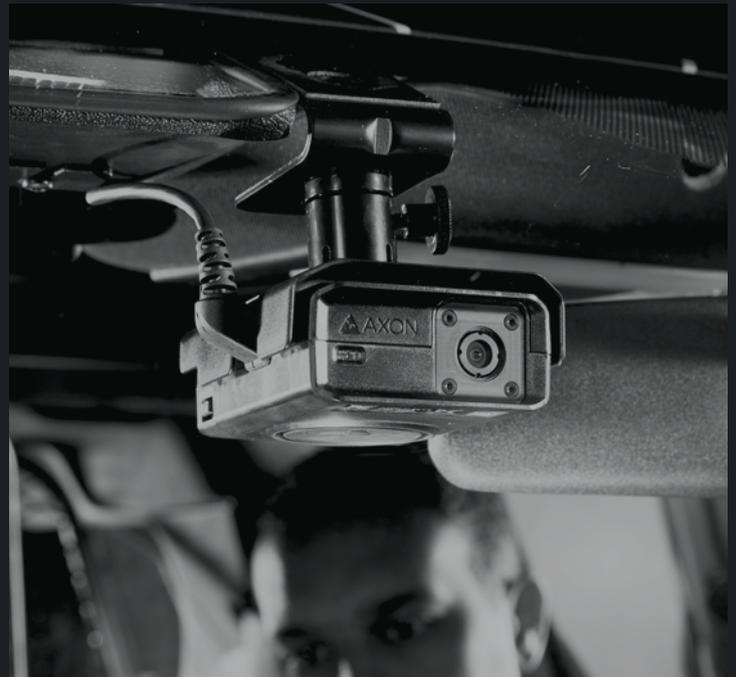

The Axon Flex 2 point-of-view camera protects the truth with new levels of clarity

- **See more. Hear more. Miss nothing:** Record unlimited amounts of retina HD through 120 degrees, capture higher quality sound thanks to dual-channel audio and set a buffer of up to two minutes so no events are missed.
- **Protect officers and the truth:** Help officers stay focused on what's in front of them, with Axon Signal switching the cameras to record when events happen (e.g. when a car door is opened).
- **Work with video on-the-fly:** Stream, tag and replay any camera's videos in the field (Axon View XL app required).
- **A comfortable to wear, but tough, full-shift partner:** With versatile mounts, a 12-hour battery and a rugged build, the Axon Flex 2 is ready to work as hard as your people.

AXON FLEET 2: CAMERA INNOVATION HITS THE ROAD

Benefiting from extensive feedback from front-line teams, Axon Fleet 2 offers enhanced features and is fully integrated with our evidence management system to streamline processes. It's always improving, too, thanks to over-the-air software updates and, if new hardware becomes available, you'll receive this also.

- **See more. Hear more:** A sleeker and rotatable front-facing camera with improved mounts ensures a wider field of view and stable recording, while the digital zoom can read number plates 10 metres away. The wireless microphone collects audio over a 300-metre range.
- **See what's behind in greater clarity:** The new rear camera is equipped with infrared for greater visibility in low light.
- **Protect officers and the evidence:** With Axon Signal switching the cameras to record when events happen (e.g. when a door is opened) officers can keep their eyes on events safe in the knowledge that their technology is capturing what's happening.
- **Work with video on-the-fly:** Stream, tag and replay videos on-the-fly through the vehicle's Mobile Data Terminal (MDT) and watch up to four videos, including in-car and body-worn footage, from multiple users at a scene via Evidence.com.
- **Easily transfer video:** Connect to Evidence.com using Wi-Fi or 4G.

AXON'S CAMERA ECO-SYSTEM: PROTECTING OFFICERS AND THE TRUTH

AXON SIGNAL: STAY FOCUSED ON THE MOMENT – AND GET THE FOOTAGE

Because the last thing your teams need to think about when approaching incidents is technology, our network has their backs. It protects them in the background, with our cameras switching to record based on events that you define.

AXON SIGNAL:

CAPTURE VIRTUAL FOOTAGE WITHOUT LIFTING A FINGER

Signal Vehicle allows your Axon Body 2, Axon Flex, Axon Flex 2 and Axon Fleet and Fleet 2 cameras to sense nearby events and start recording, such as the opening of the car door or the arming of a TASER X2.

AXON SIGNAL:

PERFORMANCE POWER MAGAZINE - SET RECORDING RULES BASED ON SMART WEAPON USAGE

Signal Performance Power Magazine captures critical footage when using the TASER X2. The battery reports to our nearby cameras when a weapon is armed so they start recording, and logs the moment the trigger is pulled and the arc is engaged.

AXON SIGNAL SIDEARM:

UNIVERSAL – SET RECORDING RULES BASED ON SIDEARM USAGE

Wireless and compatible with most regulation sidearm holsters, Signal Sidearm ensures there's no difference in the range of motion or feel of a draw. It alerts nearby Axon cameras to start recording when a weapon is drawn and creates an audit report in Evidence.com.

³ Axon View XL app required

AXON SOFTWARE: CAPTURE, STREAM, VIEW AND TAG VIDEO FROM THE FIELD

Our dedicated smartphone apps for public safety enable officers to securely and easily capture and work with video in the field to enhance evidence capture and move to paperless workflows. We also provide an app that allows the public to become your eyes and ears by submitting digital evidence directly into Evidence.com. The apps include:

AXON CAPTURE: COLLECT VIDEO AND IMAGES ON THE GO

Axon Capture eliminates the need for officers to carry multiple devices in the field by capturing video, images and audio using their smartphone. Robust security is built in with pin-code access and the option to configure deletion and security protocols. Specially designed for evidential requirements, officers can add metadata on-the-fly, while images and videos are tagged with GPS data and all files are automatically synced to each officer's Evidence.com profile – all without leaving the scene.

AXON VIEW: ACCESS AND WORK WITH VIDEO IN THE FIELD

With Axon View, you can connect body worn cameras to smartphones. It offers a range of features – including in-field and real-time tagging of metadata, keyword search and instant video playback – to seamlessly manage everything officers need to turn routine video into valuable evidence, freeing them to do their job without distractions.

AXON CITIZEN: ALLOW THE PUBLIC TO BE YOUR EYES AND EARS

Axon Citizen enables three-click evidence submission that officers can make available to individual witnesses or your entire community. Content goes into Evidence.com where it's instantly categorised and searchable. Audit trails show officer and collection information and data while community members can choose to keep their contact information from being stored in the app. There's no limit on file sizes. All submissions are screened for viruses. And triage tools help your teams quickly decide which media to accept or decline.

AXON'S CLOUD SOLUTION: SECURE, PAPERLESS AND EFFICIENT EVIDENCE MANAGEMENT

The amount of digital evidence agencies hold is increasing all the time. Securely managing and sharing it can be time consuming and expensive. In many countries this involves teams manually cataloguing images and video to create secure evidence discs that are then couriered to prosecutors. We've re-thought this process, creating a powerful, efficient and paperless cloud-based platform dedicated to evidence management.

EVIDENCE.COM: CAPTURE, CATALOGUE AND SHARE

Evidence.com is our cloud-based solution that provides a convenient, quicker and lower-cost way to manage digital files to evidential requirements – including video, audio and images, and TASER Smart Weapon data. It's trusted by public safety agencies across the world to host digital evidence, with Axon the custodian of over 24 petabytes of data. With it, you can easily:

- **Collect evidence:** Upload in any file format, from any device.
- **Transfer evidence:** Auto-upload files from Axon devices and hard drives.
- **Manage evidence:** Keep evidence organised and tag it with the right metadata and find it quickly with intuitive search.
- **Share evidence:** Grant access to people (e.g. prosecutors), or share content with a secure link.
- **Automate metadata creation:** Integrate your Computer Aided Dispatch (CAD) or Records Management System (RMS) with Evidence.com to automate the process of tagging videos with complete, correct metadata.

TIME SAVINGS AT WEST MIDLANDS POLICE

West Midlands Police is the UK's second-largest police force. Prior to moving to Evidence.com, its officers followed a long process when using images as evidence. Now images are securely processed and evidential data added and sent to Evidence.com using Axon's suite of mobile applications. Commenting on the solution, PC Will Salt, Subject Matter Expert, Body Worn Video, West Midlands Police, says:

"On average, each officer saves around two hours every time they take a photo exhibit: that's a massive time saving across a year. This will only increase as we embed Evidence.com into our workflows."

AXON'S CLOUD SOLUTION: SECURE, PAPERLESS AND EFFICIENT EVIDENCE MANAGEMENT

EVIDENCE.COM LITE: MANAGING TASER SMART WEAPON DATA

Evidence.com Lite is a complementary alternative to Evidence.com for agencies that use TASER Smart Weapons only. It allows you to manage all your devices in one place – and access the dashboard from any computer – including:

- **Assigning or removing weapons**
- **Customising user role configurations**
- **Installing the latest software**
- **Recording all data from devices including pulse logs**
- **Defining retention schedules for footage captured by officers' cameras via Axon Signal**

You can upgrade to the full capabilities of Evidence.com at any time.

EVIDENCE SYNC: REPLACE MANUAL FILE SHARING WITH SECURE AND EFFICIENT DIGITAL PROCESSES

Evidence Sync enables your teams to easily upload evidence in any format, from any source to Evidence.com – and access it anywhere, anytime. With Evidence Sync you can:

- **Easily manage uploads:** Upload evidence of any type, from any source.
- **Automate workflows:** Schedule automatic file uploads from specified folders or hard drives. For large files the transfer can be set to continue after teams log out.
- **Annotate video files:** Files can be painlessly annotated through a simple interface.

ALWAYS IMPROVING

Law enforcement agencies across many countries face the challenge of maintaining and improving service levels at a time when caseloads aren't falling but budgets often are.

At Axon, we believe technology can square this circle.

We apply our curiosity and restless energy to continually improve our network of devices and apps – to better safeguard front-line teams, build trust with citizens and improve processes – to help officers spend less time on paperwork and more on what they signed up for. When you're part of the Axon network, you automatically receive software updates – or replacement hardware when available – ensuring that your technology is always the latest and best available. And, as we look forward, we're incredibly excited about how new solutions – such as automating the creation of crime reports from officers' video footage – will dramatically reduce paperwork. In fact, our analysis of US police forces suggests that this one development alone could increase the amount of time spent on policing by a factor of three.

STREAMLINING CRIME FIGHTING

Following the successful deployment of Axon's body worn video cameras, at Blackman-Leoni Public Safety, Michigan, US, the police force also installed Axon Fleet cameras in its vehicles. Connected with Evidence.com, the solution is enabling a much more efficient approach to video capture and management as Chris Boulter, deputy director of Blackman-Leoni Public Safety, MI, says:

"We moved to the Fleet system. We have an extremely small footprint in the cars; we run the two camera systems front and back as well as being able to sync with the body cameras and are now able to collect a lot more evidence. It works seamlessly with Axon View XL and Evidence.com. I just simply add the videos to a case and share that case with the prosecuting attorney's office and they can pull up the videos in the courtroom and play it for a judge or jury right there."

For more on how we can help you safeguard your teams and citizens, ensure transparency, and securely and easily manage digital evidence, please:
