

Asset Accounting Policy

Creation Date & Authority Resolution		28 July 2017 / FRACA000085	
Version	2.0	Review Frequency	Triennial
Review Date	28 April 2023	Next Review Due	April 2026
Related Documents	Procurement Policy; Disposal of Land & Assets Policy		
Applicable Legislation	Local Government Act 1999;		
	Australian Accounting Standards & Regulations;		
	Local Government (Financial Management) Regulations 2011		

1. Overview

The Fleurieu Regional Aquatic Centre Authority (the Authority) assets shall be recognised, capitalised, and revalued in accordance with Accounting Standards and this policy.

The Authority will develop a 10-year Asset Management Plan to assist in meeting its asset management objectives. The Authority's Long Term Financial Plan and Annual Business Plan and Budget will incorporate the management activities identified in the Asset Management Plan.

2. Purpose

This policy provides guidance to ensure compliance with legislation which requires the Authority to account for and report on assets in its financial statements.

The guidance aims to facilitate better understanding of the value and cost of the assets the Authority uses to provide services; enabling better planning and decision-making regarding asset acquisition, management, and disposal.

3. Scope

The accounting policies of the Authority must comply with requirements of the Australian Accounting Standards (including interpretations, as made by the Australian Accounting Standards Board AASB).

Asset accounting involves developing a detailed register of all assets and the setting of appropriate recognition thresholds. It involves decision-making on how to:

- Categorise assets.
- Determine asset life and depreciation amounts, which should reflect the levels of service provided by the asset.
- Value and revalue assets.
- Treat asset impairment, asset disposals and write offs.

4. Definitions

Asset	A resource controlled by an entity as a result of past events and from which future economic benefits are expected to flow to the entity.		
	For the purposes of this policy, assets include Infrastructure, Property, Plant Equipment i.e., non-current assets and excludes current assets such as stoc inventory.		
	This includes physical assets that meet a pre-determined threshold and that are used in the course of business over more than one accounting period. Examples are buildings, equipment, land, storm and wastewater systems.		
Asset Management	The combination of management, financial, economic, engineering and other practices applied to physical assets with the objective of providing the required level of service in the most cost-effective manner.		
Carrying Amount	The amount at which an asset is recognised after deducting any accumulated depreciation and accumulated impairment losses.		
Depreciation	The systematic allocation of the depreciable amount of an asset over its useful life.		
Fair Value	Fair value is the amount for which an asset could be exchanged between knowledgeable, willing parties in an arm's length transaction.		
Impairment	The decline in the future economic benefits or service potential of an asset, over and above the use reflected through depreciation.		
Maintenance	All actions necessary for retaining an asset as near as practicable to its original condition, including regular ongoing day-to-day work necessary to keep assets operating.		
Residual Value	The estimated amount that an entity would currently obtain from disposal of the asset, after deducting the estimated costs of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.		
Useful Life	The period for which an asset is expected to be available for use by an entity.		

5. Policy Principles

5.1. Recognition of an Asset

An asset is recognised in the balance sheet when it is probable that future economic benefits will flow to the entity and the asset has a cost that can be measured reliably.

An asset that qualifies for recognition as an asset will be recognised at cost as at the date of acquisition, including costs directly attributable to bringing the asset to the location and in the required condition for operation by the Authority. Where an asset is acquired at nil or nominal cost, it will be recognised at its Fair Value as at the date of acquisition.

Assets should have a useful life of greater than one year to enable capitalisation of the expenditure and should also meet a materiality test. Materiality levels are set so as not to misstate Financial Statements and to provide a guide whether it is practical from an administrative perspective that expenditure is capitalised. No capitalisation threshold is applied to the acquisition of land or interests in land.

Materiality levels for capitalisation are:

- \$1,000 for furniture and fittings
- \$1,000 for plant and equipment.
- \$5,000 for buildings including major plant and other structures.

Expenditure can still be capitalised on items that fall below the materiality thresholds individually but operate together as a cohesive whole to form a significant total value.

Software capitalisation involves the recognition of purchased or internally developed software as an asset.

5.2. Measurement at Recognition

An item that qualifies for recognition as an asset shall be measured at its cost on the date of recognition. Cost is determined as the fair value of the assets given as consideration plus costs incidental to the acquisition and all other costs incurred in getting the asset ready for use. Where an asset is acquired at no cost, or for a nominal cost, the cost is its Fair Value as at the date of acquisition. The following years after asset recognition the asset will be valued at Fair value according to the revaluation program as determined.

5.3. Depreciation of Non-Current Assets

All non-current assets have a limited useful life except for land and land improvements. The depreciable amount of all non-current assets, excluding freehold land and land improvements, are systematically depreciated over their useful lives which reflects the consumption of the service potential embodied in those assets.

Depreciation of an asset begins when it is available for use i.e. when it is in the condition necessary for it to be capable of operating in the manner intended; and ends when it is classified as held for sale or when derecognised.

Depreciation of assets is calculated on a straight-line basis using the following standard estimates for useful lives. The useful lives for building, furniture and fittings; and plant and equipment assets have been estimated based on industry standards and consultancy advice. The actual useful life and therefore depreciation rates may be varied for specific assets where asset quality and environmental and/or operational conditions so warrant.

Useful lives and residual values for each class of asset are reviewed annually and are included in the Asset Register which is updated following adoption of the annual financial statements each year.

Asset Classes

Buildings:

Asset Component	Estimated Useful Life	
01 Sub-Structure	98 to150 years	
02 Structure	98 to 150 years	
03 Floor Coverings	33 to 36 years	
04 Fitout	48 to 100 years	
05 Roof	64 to 100 years	
Services	19 to 150 years	
25m Swimming Pool	58 to 120 years	
Other Structures	14 to 135 years	

Furniture and Fittings:

Asset sub-category	Estimated Useful Life	
Furniture and Fittings	5 to 35 years	

Plant & Equipment:

Asset sub-category	Estimated Useful Life	
Plant and Equipment	5 to 35 years	

5.4. Revaluation of Non-Current Assets

Non-current assets are revalued with sufficient regularity to ensure that the carrying amount does not differ materially from that which would be determined using fair value at reporting date in accordance with Australian Accounting Standards and Regulations under the Local Government Act 1999.

The following asset classes will remain at cost and will not be revalued:

- Plant and Equipment
- Furniture and Fittings

Determining the frequency of valuations depends on striking a balance between having relevant, timely information and the cost of obtaining such information. Therefore, it is appropriate to provide for periodic comprehensive revaluations with interim revaluations based on specific indices. Non-current assets that are subject to revaluation will be subject to a desktop review and potential application of a suitable price escalator after two years; with a more rigorous review of asset valuations (conducted on a 'fair value' accounting basis) occurring at an interval of no more than 5 years.

5.5. Residual Values of Non-Current Assets

The residual value of buildings, plant and furniture and fittings that are traded at the end of their useful life, can be calculated via AASB13 Fair Value Measurement. The residual value of the asset is what is expected to be obtained at trade in. The residual values of buildings, plant, equipment and furniture and fitting assets are based on market evidence and advice provided by independent valuations of these assets.

Residual values are not recognised for infrastructure assets.

5.6. Impairment

Assets that have an indefinite useful life are not subject to depreciation and are reviewed annually for impairment. Assets that are subject to depreciation are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognised for the amount by which the asset's carrying value exceeds its recoverable amount in accordance with AASB 136.

External indicators for impairment may include significant adverse changes in the technological, market, economic or legal environment. Internal indicators may include obsolescence or physical damage of an asset.

Impairment shall be determined subject to the provisions AASB 1031 Materiality, whereby the total change in the written down value for the asset or the total impact on the depreciation shall be material. An impairment loss is recognised in the Income Statement, unless the asset is carried at a revalued amount, whereby it is to be treated in the same way as a revaluation decrement against the same asset. An impairment loss can be reversed in subsequent years.

5.7. Disposal or Sale of Assets

The disposal or sale of assets must be made in accordance with the Authority's Disposal of Land and Assets Policy.

5.8. Asset Management

The goal of asset management is to provide a required level of service, in the most costeffective manner, through the management of assets for present and future customers.

To ensure long-term sustainability, the Authority has a responsibility for planning, developing and maintaining its assets for the benefit of the community.

When developing its Asset Management Plan, the following four steps will be taken into consideration by the Authority:

- Know what assets the Authority owns and the service standards target for those assets. Then estimate the cost to maintain the assets to meet the level of standard of service.
- 2) Consider any increased demand and costs for services from development growth or the impact of a declining population or other changes in population.
- 3) Prepare a life cycle management plan for all of the Authority's assets. This will diminish the risk of unexpected expenditure when assets start failing.

4) Undertake risk and financial projections to determine which assets are most important to the community, its needs and safety.

5.9. Asset Register

The asset register for Infrastructure, Property and Plant will maintain details of Fair/Replacement/Historical Value, Accumulated Depreciation and Carrying Amount for each asset and asset class, along with historical information relating to revaluation and impairment.

Depreciation will be calculated and applied monthly and reconciled with the asset records where applicable at 30 June each year.

Asset additions and disposals will be recorded and reconciled at least quarterly.

Asset registers will be used to ensure that the Authority has adequate security arrangements and insurance cover to ensure fixed assets are protected from destruction, deterioration, theft; or fraudulent or illegal use. A register will also be kept for minor items which may be more likely to be subject to loss.

5.10. Asset Investment Appraisal Process

Recognising that the resources of the Authority are limited, all asset investment decision making shall be considered in relation to the community need and a long-term outlook. All projects will go through an Authority Board appraisal process including undertaking due diligence processes as appropriate.

Projects should only be approved once the impact on the long-term financial plan has been determined and agreed by the Authority.

6. Responsibilities

The Authority Executive Officer has overall responsibility for ensuring that the acquisition and capitalisation of all assets is conducted in accordance with legislation, Accounting Standard and Authority policies.

7. Delegations

The Authority Executive Officer has the authority to implement this policy.

8. Availability of Policy

This Policy will be available on the Fleurieu Aquatic Centre website.

9. Review

This policy shall be reviewed by the Authority triennially.
